WedgeRock HANDWHEELS

Our handwheels are designed to be compatible with our quarter-turn and multiturn operators, manual overrides, and position indicators. They can also be adapted for use with products from other manufacturers by sizing the correct bore sizes and cross hole diameters. WedgeRock handwheels have the following bore and cross hole configurations:

- 0.438" bore, 0.125" cross hole
- 0.563" bore, 0.188" cross hole
- 0.750" bore, 0.250" cross hole
- 1.00" bore, 0.391" cross hole

Standard Features

- Carbon steel tube welded construction
- Standard black powder coat

Options

- Custom handwheel material configurations and sizes available upon request
